

Medical assessment of fitness to study at higher education institution

Higher education institution: University of Chemistry and Technology, Prague

ID No.: 60461373

with registered office at: Technická 5, 166 28 Praha 6

Study programme(s):

Type of study (please mark): bachelor/master/doctoral

(hereinafter the University”)

Health services provider issuing this certificate:

Name:

ID No.:

Address and registered office of business:

(hereinafter the “Health Services Provider”)

Assessed person:

Name:

Date of birth:

Residence:

(hereinafter the “Assessed Person”)

The Assessed Person is:

able

able with certain restriction

unable

to study at the University in the above stated programme.

Statement of the Assessed Person:

I declare to have stated all information on my state of health, health restrictions and medications taken by me.

Signature of the Assessed Person:

Assessment valid till:

Place Date

Medical Services Provider

stamp and signature

Information on rights:

The request shall be filed through the Health Services Provider who issued the Assessment. The request for review of the Assessment shall not have suspensive effect in cases stated in Section 46 paragraph 3 of the Act on Specific Health Services. The right of review of the Assessment may be waived by the Assessed Person in writing.

Dear Doctor,

For easier assessment of fitness to study of a prospective student of UCT Prague, let us inform you about the potential health risks of the study.

The study at UCT Prague involves high share of work in the chemical and technological laboratories, where students have access to a wide scale of chemicals, they use them and come into direct contact with them. Since the range is extensive, it is not possible to provide a complete list of the chemicals. Within the laboratory training, not only the health of the student may be endangered, but also the student may put into danger the health of other persons. Therefore, during the fitness to study examination, it is desirable to take into account not only general fitness but also conditions which may mean a contraindication for work with chemicals, or which mean certain restrictions for such work.

With reference to the Attachment 2 of Decree 79/2013 Coll., section Chemical Factors, namely the following illnesses and conditions are concerned:

Conditions that are contraindications to the study, if not assessed by the respective specialist otherwise:

- serious mental disorders (namely disorders with serious prognosis or disorders with repeated decompensation and need for repeated treatment in hospital),
- serious personality disorders with behaviour disorders,
- current alcohol or drug addiction.

System conditions the course of which may be negatively affected upon exposure to chemicals:

- nervous system diseases with serious prognosis,
- liver diseases with serious prognosis,
- kidney diseases with serious prognosis.

Conditions which may represent certain restrictions during the study with the need to limit or exclude exposure to certain substances:

- allergies, namely allergic skin diseases and allergic respiratory system diseases (in case of identified allergy to specific substance please mark exclusion of contact with such substance).

Faithfully,

MUDr. Alžběta Sacherová
Practitioner at UCT Prague
